

CYBER ethics

CYBERTECHNOLOGY has complicated our view of traditional ethical issues.

Consider a self-driving car – In a case where the car will crash, what should the car crash into? Should the software make the decision, or should it ask the user

CYBER ETHICS is a new branch of ethics changing rapidly as technology develops.

to decide? Should the software not intervene in the situation at all? Who is responsible for an emergency in a self-driving car - the developer, the user, the manufacturer or another party?

How should a self-driving car act in an emergency?
